### **PROJECTS**

---

- (2018) Developed the **EM-TYPER**, an amharic, tigrigna, oromigna and somaligna and english typing tutor software, together with a colleague
- (2019) Developed and implemented a product called **Tazajobs** that has both Web and mobile apps to make the life of both job seekers and employers easier. Employers can use the web app to post jobs and recruit job applicants while employees use the mobile app to find targeted jobs and apply for a job. The system was developed in vue.js, nodejs, loopback, flutter, and mongodb.
- (2019) Developed and implemented several components of the cloud-based hahujobs.net **enterprise services** including the **attendance**, **leave** and **payroll** management services.
- (2020) Developed and implemented **M4CD** a web-app that provides a variety of resources to assist Ethiopian students and alumni with career exploration and guidance, job and internship search as well as scholarships. Training and learning materials are accessible in various formats, such as images, videos, audios and text.
- (2021) Developed and implemented the backend and assisted admin deployment of the **hahujobs's National Recruitment Platform (NRP)** web-app - a platform for both local and overseas jobs seekers to register and take automated assessments for digital workforce mapping, screening as well as job placement. Features include conducting interviews, assessments, job orders and allocations.
- (2021) Developed a responsive web-app Habesha Entrepreneurs credit and saving Association (SACCO), which is available at **<https://habeshaentrepreneurssacco.com>**
- (2021) Developed and implemented the backend and frontend of **oh-core-health** 2.0 which is a versatile web app that allows healthcare centers and hospitals manage and digitize most of their health-care work-flow.
