ABOUT ME

A fullstack developer with 5+ years of overall experience, specializing in Vue.js, Node.js, Express.js, Hasura, Nuxt.js, Javascript, Typescript, and more!

WORK EXPERIENCE

12 SEP 2022 – 1 JUL 2024 California, United States
SENIOR FULLSTACK WEB DEVELOPER CROPCONEX INC

- Working remotely for a US company called Cropconex.
- CropConex simplifies coffee commodities contracts, global supply chain management, and international payments so you can streamline logistics and trade with confidence.
- It is a very big application and has different components like coffee marketplace, contracts, inventory management, order management, planning, shop management, online payment and invoices management etc.
- With CropConex, you can:
    - Register coffee harvests from growers and field workers. Record the source, weight, price, variety, certifications, and more.
    - Group harvests into lots, track processing across drying beds, and record weight loss over time.
    - Assess the physical and sensory quality of your coffee according to industry standards or link analyses of third-party graders.
    - Have easy access to green coffee stock levels helps forecast production planning. Gain full visibility of stock in and out across warehouses. Link lots to harvests, samples, and sales records.
    - Sell coffee to your existing buyers using CropConex contract management tools or find new buyers by listing coffees publicly in the Marketplace.
    - Request logistics support to compare costs across sea and air freight providers or share your coffee order details to your existing providers directly through the platform.
    - Enjoy the freshest coffee on the market and rate your experience of supplier communication and coffee quality and share feedback with each sale.
    - Pay online for your orders and manage your invoices

18 JUN 2022 – 1 DEC 2022 California, United States
FRONTEND DEVELOPER CHATFULLY LLC

- Working remotely for a US company from Ethiopia.
- Chatfully unifies customer messages and automate follow-up with an omnichannel chat tool that an entire team can use.
- With Chatfully, you can centralize communication in team inboxes, chat at scale, and follow-up with opportunities faster.
- **#Quasar #Vue.js #Javascript #Clickup**

9 MAY 2021 – CURRENT Addis Ababa, Ethiopia
SENIOR SOFTWARE ENGINEER ORBIT HEALTH INC.

- I worked on many projects in orbit health inc, and one of them is orbit 2.0, which is a healthcare management system that automates almost every action of a healthcare facility.
- It's a very big project and has 6 modules, namely:
    - authentication and setting - user signup, sign-in, roles, permissions, settings, etc
    - Patient - appointment, triage, MCH, admissions, etc

- Laboratory and Imaging - tests, orders, results, reports, etc
- Pharmacy - prescriptions, dispenses, inventory, reports. etc
- Finance - invoices, finance groups, deposits, reports, etc
- Orbit 2.0 is a complete rewrite of orbit 1.0 which had a bad design, implementation, and old technology.
- Output - Many facilities were able to eliminate paper-based work and serve customers well.
- **#Vue.js #Node.js #Nuxt.js #GraphQL #Jira #ApolloClient #JWT #PostgreSQL #Express.js**

30 SEP 2021 – 2 OCT 2022 Addis Ababa, Ethiopia
FRONT END DEVELOPER GEBERE

- Gebere(Meaning farmer in Amharic) is a crowd farming web app that is aimed to provide public funding to farming-related projects
- It has two separate front-end deployments. One is intended for investors and is public while the other app is an admin's app that is intended to control the general behavior of the system.
- Projects with how much money they need and other details are defined in the admin app and will be accessible to the public via the investor's app.
- **#Vue.js #Typescript #TailwindCSS**

20 MAY 2021 – 12 APR 2022 Addis Ababa, Ethiopia
SENIOR BACKEND DEVELOPER EKUB

- Ekub is an Ethiopian ROSCA(rotating savings and credit association) system.
- It has specific rules and guidelines. People will gather in groups to save money weekly, monthly, or annually.
- There's a lot drawn on specific dates and it will be allotted to one of the group members.
- You can also borrow from the Ekub in case of emergency.
- We have automated the process and eliminated any paperwork.
- **#Node.js #GraphQL #Express.js #test #unitTest**

1 NOV 2018 – 9 FEB 2020 Addis Ababa, Ethiopia
FULLSTACK DEVELOPER EPSILON TECHNOLOGIES

I have worked on many projects for Epsilon Technologies but the main one is **TazaJobs**
- TazaJobs is a job finding and recruiting system designed to simplify the process of job finding and recruitment.
- It contains a mobile application suited for job seekers and a web app for employers.
- How it works is you choose your job interests and, get jobs based on those interests. You can also get full details of the companies posting the jobs. You can save a job and access it another time.
- Output - Job seekers were able to find and apply to thousands of jobs from the comfort of their homes. They were also able to build a professional CV that they can apply with. Employers were able to easily post their job vacancies and reach out to job seekers!
- **#Vue.js #MongoDB #Node.js #Loopback.js #JWT**

15 SEP 2019 – 9 MAY 2021 Addis Ababa, Ethiopia
FULLSTACK DEVELOPER MINAB TECH

I've worked on a lot of projects in Minab tech. some of them are:

JCC NRP
- JCC NRP is a platform for both local and overseas job seekers to register and take automated assessments for digital workforce mapping, screening as well as job placement.
- It is designed to register, build profiles, provide free screening, keep track of all training, testing & certification of overseas job seekers while digitalizing the documentation process for legal and safe ways of working abroad.
- In doing so the platform will also be able to map out the national jobseeker landscape and provide a data-driven job matching public services for both local and foreign needs.
- Job seekers were able to register, build their profile, take automated assessments and get matched to a job.
- **#Vue.js #Node.js #Nuxt.js #PostgreSQL #GraphQL #Hasura #Express.js**

HahuJobs University
- HahuJobs University is a web application that is intended to provide a much-needed remote digital content provision for students both in university and TVET schools in the wake of this pandemic which largely affected their learning process as all students were made to stay at home.
- Universities will register and get verified and will post course contents (video, pdf, images, etc), announcements, etc to their students or even to the public.
- Students can download and comment on posts and announcements.
- **#GraphQL #Express.js #Nuxt.js #PostgreSQL #Node.js #Vue.js #vuetify**

HRMS (Human resource management system)
- It's a human resource management system that has employee registration/termination, attendance management, payroll management, leave management, and training management modules.
- Our clients were able to eliminate paperwork regarding human resource management! And hence they have become more productive.
- They were also able to eliminate erroneous manual work as the system will do it for them - for example, calculating salaries of employees according to their attendance and paid/unpaid leaves.
- **#Vue.js #Node.js #Loopback.js #MongoDB**

Website for Habesha Entrepreneurs credit and saving Association
- Habesha Entrepreneurs credit and saving Association (SACCO) is established to narrow the financial gap of SME entrepreneurs, create market linkage, and shorten unnecessary market chains.
- Output - The company was able to register more members using the website and grow!
- https://habeshaentreprenurssacco.com
- **#Vue.js #Nuxt.js #GraphQL #Hasura**
